The Municipality of Tábua informs that due to the fires that devastated our region, there were several infrastructures that were damaged and that compromise the normal functioning of the Waste Treatment Center of the Planalto Beirão.

Therefore, although the collection (SELETIVA and RSU) has resumed its normal operation on October 18, 2017, it is important to highlight the following precautions to take with the waste:

- Do not deposit debris or burned residues in the trash containers;
- The debris must be delivered to Ecocentro facilities.

Although the conditions for the disposal of garbage are met, the Municipality of Tábua also appeals to the residents not to deposit the differentiated waste in the garbage containers and in the ecopoints.
