The Municipality of Tábua and the company EDP warn that people in the regions affected by the fires, for safety reasons, do not touch any broken lines and also for the care to have with the placement of generators in places little ventilated and its use may cause poisoning.

Regarding the electricity grid in our county, it is practically restored, and there are only some customers from dispersed localities of the Municipality of Tábua without electricity, a situation that should be resolved by the beginning of next week.

It should also be mentioned that our services have done everything together with the company EDP, to restore the normal operation of the electricity network as quickly as possible.

We are grateful for the understanding of all and the collaboration of the entire population, namely in the detection / information of places without electricity.

NOTE: In case of housing without electric energy, the services of the company EDP or the Chief of Staff of the Presidency of the Municipality of Tábua should be contacted.
